

The video titled “**Mint-to Logic Valipass explainer video**” on YouTube provides a visual demonstration of the **Mint-to Logic™ validation lifecycle**, a protocol developed by Spencer Southern and filed under provisional patent.

What It Covers:

- **Lifecycle enforcement** of digital credentials and logic.
- The concept of **ValiPass**, likely a credential or token governed by Mint-to Logic™.
- Key lifecycle stages such as **Mint**, **Validate**, and **Burn**, showing how credentials evolve or expire based on behavioral conditions.

Why It's Significant:

- It visually reinforces the **jurisdictional IP claims** made in the Mint-to Logic™ Carrd and whitepaper.
- Serves as **timestamped evidence** of the protocol's functionality and authorship.
- Can be used in your vaulting system alongside SHA-256 hashes, snapshots, and written declarations to prove **first-to-market innovation** and **behavioral governance infrastructure**.

If you'd like help extracting key frames, hashing the video file, or writing a vaulting summary for this video, I'm here for it.
